Install APM

APM stands for

1. Apache, as a web server program
2. PHP, as a server-side programming language
3. MySQL, as DBMS

To implement web server that uses DBMS, you should install APM. There are two ways to install APM, but I recommend you to download as first way.

1. Download a combined software "XAMPP"

<https://www.apachefriends.org>

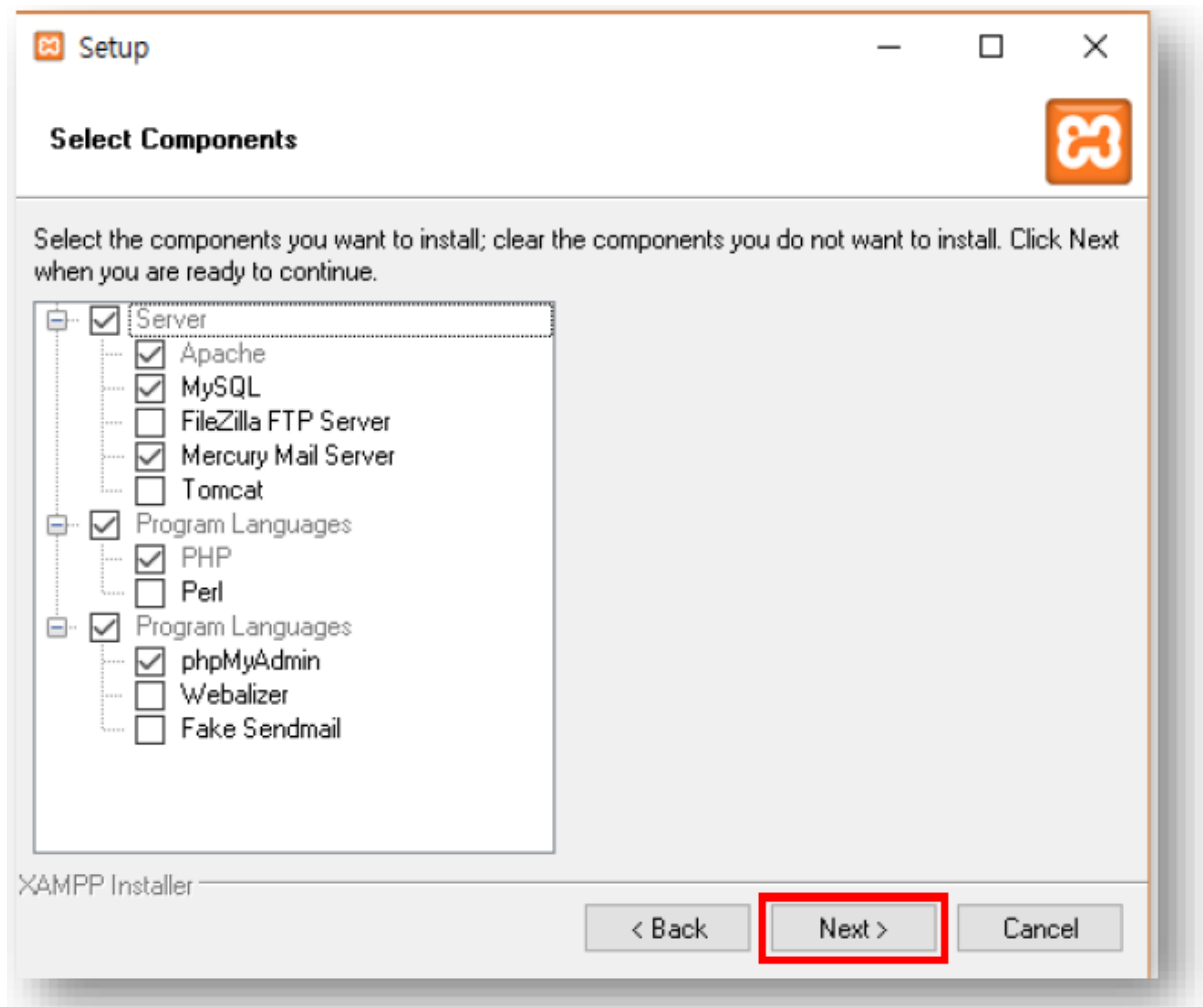

2. Download the three software independently

Apache: <http://apachelounge.com/download/>

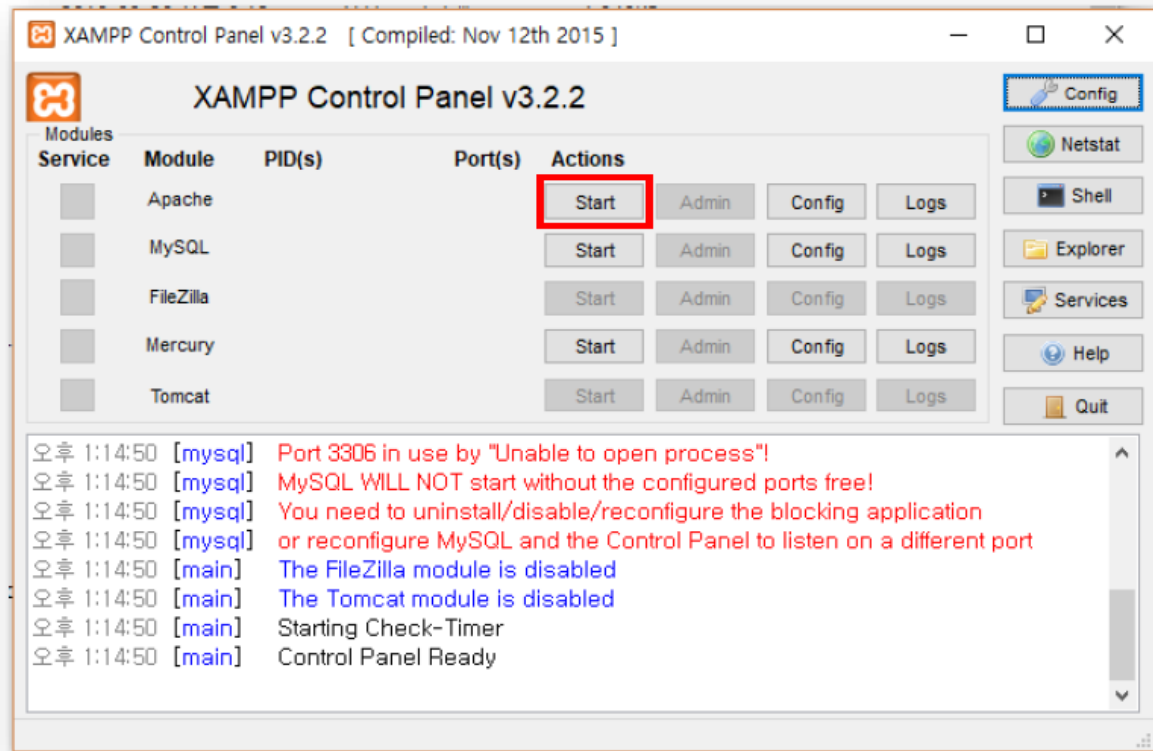

PHP: <http://windows.php.net/download/>

MySQL: <http://dev.mysql.com/downloads/mysql/>

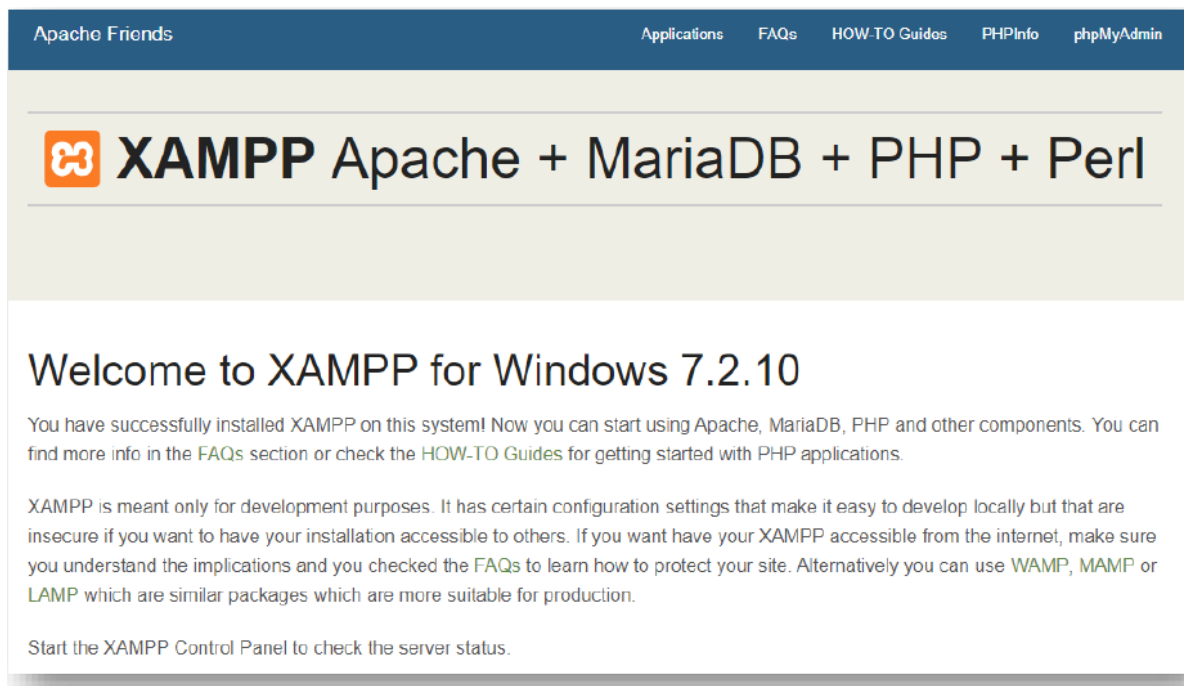

In setup, you just check what to need as follows, and just click "next" for others:

After installation of XAMPP, control panel is going to open. Click "Start" to begin Apache, and check it working as follows:

To check working of Apache, access to <http://localhost/dashboard/>. If you can see the image as below, click [Stop] Apache, and [Quit].

Modify C:\xampp\apache\conf\httpd.conf as follows, note that \ is same as back slash:

1. Check [ServerRoot] of Apache

```
39 ServerRoot "C:/xampp/apache"
```

2. Check [Listen] for port number

```
60 Listen 80
```

3. Modify [DirectoryIndex]

```
284 <IfModule dir_module>
285     DirectoryIndex index.php index.pl index.cgi index.asp index.shtml index.html index.htm \
286     default.php default.pl default.cgi default.asp default.shtml default.html default.htm \
287     home.php home.pl home.cgi home.asp home.shtml home.html home.htm
288 </IfModule>
```

```
284 <IfModule dir_module>
285     DirectoryIndex index.php index.html
286 </IfModule>
```

Modify C:\xampp\php\php.ini

1. Check default_charset

```
705 | default_charset="UTF-8"
```

2. Modify date.timezone

```
967 [Date]
968 ; Defines the default timezone used by the date functions
969 ; http://php.net/date.timezone
970 ;date.timezone =
```

```
967 [Date]
968 ; Defines the default timezone used by the date functions
969 ; http://php.net/date.timezone
970 date.timezone = Europe/Chişinău
```

```
1965 [Date]
1966 date.timezone=Europe/Berlin
```

```
1965 [Date]
1966 date.timezone=Europe/Chişinău
```

(Not Romanian to write Chisinau, Write with English.)

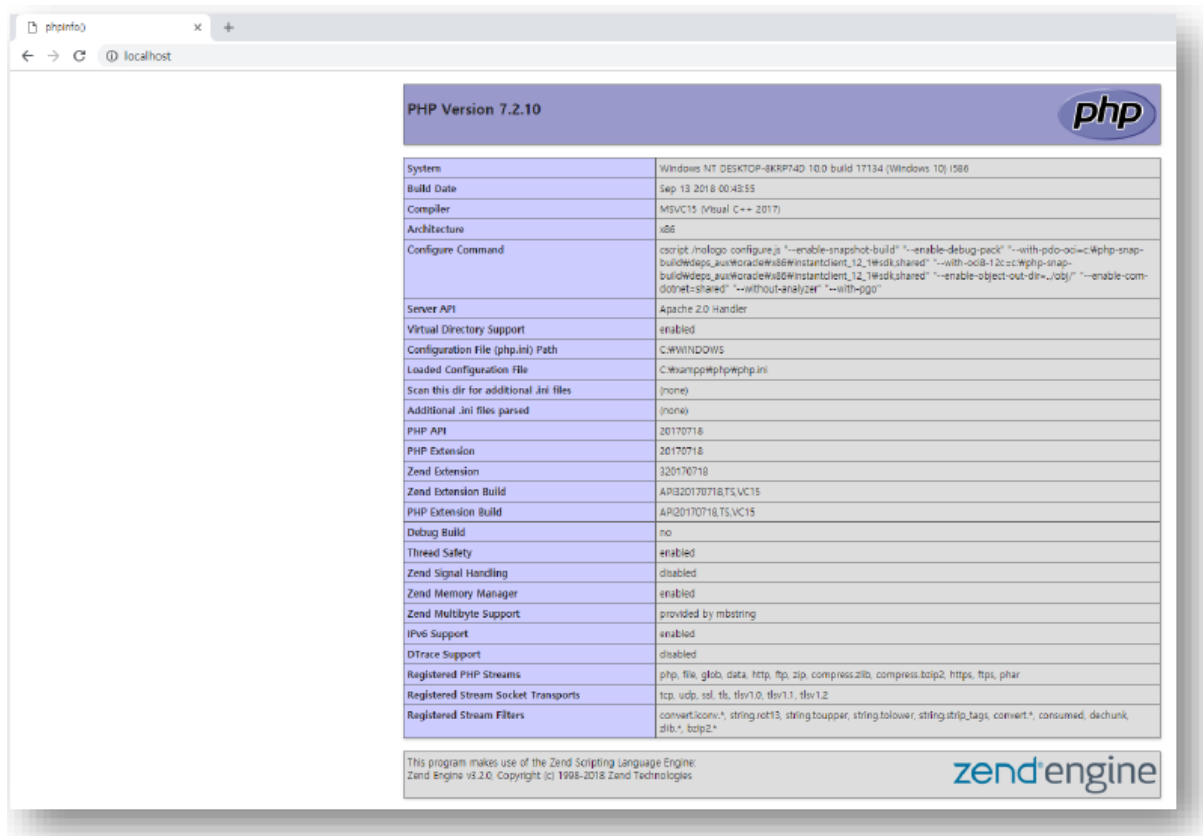

Running PHP

1. Delete whole files and write index.php in C:\xampp\htdocs as follows:

```
index.php
1 <?php
2     phpinfo();
3 >|
4
```

2. Restart Apache by using xampp-control.exe in C:\xampp

3. Access to <http://localhost> then you can show below screen in localhost

Install Java

1. Install Java version 8 at <https://www.java.com/en/download/win10.jsp>

Recommended Version 8 Update 211 (filesize: 1.95 MB)
Release date April 16, 2019

 **Important Oracle Java License Update**
The Oracle Java License has changed for releases starting April 16, 2019.
The new [Oracle Technology Network License Agreement for Oracle Java SE](#) is substantially different from prior Oracle Java licenses. The new license permits certain uses, such as personal use and development use, at no cost -- but other uses authorized under prior Oracle Java licenses may no longer be available. Please review the terms carefully before downloading and using this product. An FAQ is available [here](#).

Commercial license and support is available with a low cost [Java SE Subscription](#).

Oracle also provides the latest OpenJDK release under the open source [GPL License](#) at [jdk.java.net](#).

Agree and Start Free Download

By downloading Java you acknowledge that you have read and accepted the terms of the [Oracle Technology Network License Agreement for Oracle Java SE](#)

 When your Java installation completes, you **may need to restart your browser** (close all browser windows and re-open) to enable the Java installation.

Overview Downloads Documentation Community Technologies Training

Java SE Development Kit 8 Downloads

Thank you for downloading this release of the Java™ Platform, Standard Edition Development Kit (JDK™). The JDK is a development environment for building applications, applets, and components using the Java programming language.

The JDK includes tools useful for developing and testing programs written in the Java programming language and running on the Java platform.

Install NetBeans(IDE)

1. Download NetBeans 8.0.2 at <https://netbeans.org/downloads/8.0.2/index.html> and keep click "next" button to installation.

Setting MySQL password

1. Execute cmd

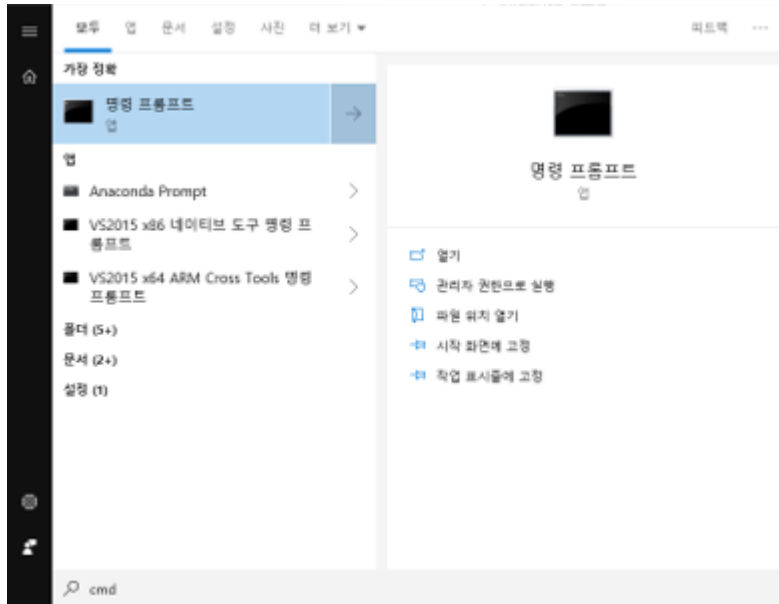

2. Type "mysqladmin -u root password "Your password in here""

Ex) mysqladmin -u root password 1234

```
C:\xampp\mysql\bin>mysqladmin -u root password 1234
```

Execute MySQL

1. Execute cmd

2. Type "cd C:\xampp\mysql\bin"

```
C:\Users\User>cd C:\xampp\mysql\bin
```

3. Type "mysql -u root -p" and enter password

```
C:\xampp\mysql\bin>mysql -u root -p
Enter password:
```

cf. If you have a error at executing on XAMPP,

1. Execute services.msc

2. Stop the service of MySQL. It is about conflict of port.
